SAFETY FIRST

Safe System Solutions for Automation Technology
Catalog 2019

HELLO WIELAND ELECTRIC

Over 100 years of safe connections.

We are the inventor of safe electrical connection technology
and are committed to individual and safe system solutions.

Together with our broad product portfolio we offer comprehensive services for
industry applications as well as building installation and lighting technology.

All our experience amounted to us being the global market leader for pluggable,
electrical installation in commercial buildings and competent partner for machine safety.
Our solutions are designed for you to be safe and secure. At the same time, we ensure you
that you integrate our systems fast and easy. This saves you time and costs. Thanks to our
modular solutions your requirements can be executed failsafe, fast and flexible.

We do business worldwide with subsidiaries, production facilities and sales partners
and have an excellent global network. Our teams are supporting customers and
projects on all continents – personally and individually. Our competences
in engineering, production and logistics processes are interlinked
with each other for maximum efficiency.

We are looking forward to be your partner.

samos[®] PRO

samos[®]

safe RELAY

sensor PRO

OVERVIEW OF SAFETY TECHNOLOGY

From the safety sensors of the **sensor** PRO series through the **safe** RELAY safety relays and the modular, with the screwdriver configurable, safety modules **samos**® to the programmable modular safety control **samos**® PRO you always get the suitable product for the protection of man and machine.

Tested technology

Of course, Wieland Electric offers only thoroughly tested and certified safety technology (i.e., all technical safety products have been approved by recognized testing institutes and meet current regulations and standards).

WIR BIETEN IHNEN:

- + INTUITIVE SOFTWARE
- + MODULAR SAFETY CONTROLLER
- + COMPACT SAFETY CONTROLLER
- + UNIVERSAL SAFETY RELAYS
- + SAFE SIGNAL DETECTION

SAMOS® PRO COMPACT

SAMOS®

SAFE RELAY

SENSOR PRO

FIT FOR **SAFETY** WITH WIELAND

Wieland supports and advises you – from the planning stage right through to start-up – throughout the entire life cycle of a machine or production system. The broad portfolio of safety switching devices covers all important safety functions and fulfills even complex customer requirements.

IMPORTANT STANDARDS FOR MORE SAFETY

The safety products from Wieland Electric fulfil a number of international standards and regulations with machine and system safety for various applications playing a major role.

SOLUTIONS FOR MANY INDUSTRIES

The safety requirements for machine and system control are becoming more demanding in all areas. Wieland Electric offers tailored, innovative solutions ranging from sensors right down to safety control.

SOLUTIONS:

- + MACHINE BUILDING INDUSTRY
- + PROCESS INDUSTRY
- + PRESSES
- + ELEVATORS AND ESCALATORS
- + CONVEYOR SYSTEMS
- + WIND TURBINES
- + FIRING SYSTEMS

- ▶ EN/IEC 60204-1
- ▶ EN/IEC 61508
- ▶ EN/IEC 62061
- ▶ EN ISO 13849-1
- ▶ EN/IEC 61511

PERFORMANCE LEVEL (PL) ACCORDING TO EN ISO 13849-1

As the successor standard to EN 954-1, EN ISO 13849-1 is based on the known categories. EN ISO 13849-1 deals with the complete safety functions, including all the devices involved in the their design.

EN ISO 13849-1 makes a quantitative assessment of the safety functions. Using the categories as a basis, the so-called Performance Levels (PL) are applied for this purpose.

SAFETY INTEGRITY LEVEL (SIL) ACCORDING TO EN/IEC 61508

In electrical control technology according to EN/IEC 61508, safety requirements can be divided into so-called Safety Integrity Levels (SIL). The risk assessment takes into account the severity of the injury (S), the frequency and duration of the exposure to the hazard (F), the probability of occurrence of a potentially hazardous incident (W), and the possibility of avoiding or limiting the damage (P). Hence, at the highest protection level SIL 3, the safety function must be maintained at all times.

Effects and severity	S	Class K = F + W + P				
		3-4	5-7	8-10	11-13	14-15
Death, loss of an eye or an arm	4	SIL 2	SIL 2	SIL 2	SIL 3	SIL 3
Permanent, loss of fingers	3		AM	SIL 1	SIL 2	SIL 3
Reversible, medical treatment	2			AM	SIL 1	SIL 2
Reversible, First Aid	1				AM	SIL 1

SAMOS[®] PRO COMPACT

The safety control of the next generation

With the highest power in the smallest space, the safety control samos[®]PRO COMPACT sets new standards in the area of machine automation.

OVERVIEW OF BENEFITS

- 24 safe in- and outputs on 45 mm construction width for space and cost savings
- USB and Ethernet interfaces for remote maintenance always on board
- PROFINET IO, EtherNet/IP and Modbus TCP are integrated in the basic module
- 2 externe Gateways für EtherCAT, PROFIBUS DP and CANopen
- 4 A switching power at each individual pair of outputs to save small contactors and relays
- Ambient temperature -25°C to $+65^{\circ}\text{C}$
- Modular extendability to up to 172 safe in-/outputs, 12 I/O modules
- Optical display of all in- and outputs in system
- Screw or push-in terminals (included in scope of delivery)

SAMOS[®] PRO COMPACT PLUS

Enhanced functionality

samos[®]PRO

The samos[®]PRO COMPACT PLUS after module version E-01 offers more functionality like certified function blocks for safety automation of mechanical or hydraulic presses. Additionally it includes safe speed,

direction and position monitoring. Furthermore the hardware from construction stage E-01 for elevators and escalators according to EN 81-20 and EN 81-50.

APPLICATIONS IN MANY INDUSTRIES

samos[®]PRO COMPACT is appropriate for the usage in machines and plants, especially as a safety controller in presses, wood, metal and plastic working machines, packaging machines, assembly lines, wind turbines, elevators, escalators and process automation.

SAMOS[®] PLAN 6

the intuitive, flexible and license-free programming software

The new samos[®]PLAN 6 software for the samos[®]PRO COMPACT system now makes programming even easier.

samos[®]PLAN 6 assists PLC programmers, electrical design engineers and developers with the planning, validation, verification and documentation of the safety application.

FEATURES

- Modules are automatically selected by samos[®]PLAN 6
→ Programming possible without product knowledge or extensive training
- Gateways, functionalities such as "Press" or "Motion" can be configured via station capabilities
→ Users decide on properties and features instead of Hardware modules
- Sensors and actuators can be configured and programmed in one step
→ Engineering input and planning time significantly reduced

SAMOS® PLAN 6

Error-free thanks to simulation and online oscilloscope

FEATURES

- Logic simulation in realtime or slowing to a factor of 20 possible
- Logging of simulated signals via logic analyzer
- Online logging of signals via online oscilloscope and export of the log data to Excel

ADVANTAGES

- Users can test the safety logic, incl. fast signal change and debouncing in advance
- Minimal errors during the planning phase and clean documentation
- Fast troubleshooting, validation, acceptance and documentation during commissioning

Intuitive thanks to automatic hardware configuration

SAMOS®PLAN 6

Cost-efficient thanks to integrated motion function

FEATURES

- Safe speed, direction and position monitoring integrated into the basic module
- All diagnostic information, including errors and warnings, are available in the software
- Multiple function blocks and limit values for standstill, SDI, SLS, SSR, SSM, SLP possible

ADVANTAGES

- Users save money, wiring and space in the control cabinet and require no additional motion module
- User-friendly diagnosis via LEDs, gateways or visualization on HMI panel
- Users require no additional rotational speed monitor thanks to software solution

MULTI-SCREEN FEATURE FOR FLEXIBILITY

FEATURES

- Each operating window can be un-docked and docked
- Simulation, hardware and logic pages can be in separate windows
- Window arrangement can be saved under multiple profiles

ADVANTAGES

- Users are able to work flexibly with multiple screens
- Simple diagnosis, verification and troubleshooting on large-scale projects
- Each user can optimize their own workspace

RELIABLE THANKS TO TÜV-CERTIFIED FUNCTION BLOCKS

FEATURES

- Over 45 TÜV certified and practical function blocks
- Special function blocks for presses to EN 692 and EN 693
- Compact functions for sequential, parallel and cross-muting
- Fast shut-off functionality

ADVANTAGES

- Swift acceptance by the inspection organizations and CE-label for the machine
- Finished solutions for press manufacturers and retrofit specialists
- Swift integration of light curtains and light grids for conveying lines and production halls
- Realtime reaction between sensor and drive on the same safety module

REMOTE DIAGNOSIS AND FORCING FUNCTION FOR EASY MAINTENANCE

FEATURES

- Forcing of inputs and variables in samos®PLAN 6 up to 480 minutes (8 hours)
- Simple connection of diagnostic outputs to lamps and gateways
- Local or remote access to log of all system messages

ADVANTAGES

- Convenient on-site commissioning, even if components are missing
- Flexible diagnosis and signaling to lamps, PLCs or HMIs
- Fast troubleshooting during downtimes

SP-COP1

COMPACT MODULE

APPLICATIONS

- Machine building industry
- Presses
- Combustion plants
- Elevators and escalators
- Wind turbines
- SIL_{CL} 3 (EN 62061-1)
- PL e / Category 4 (EN ISO 13849-1)

FEATURES

- 20 inputs, 4 outputs on the basic module
- 116 safe inputs and 52 outputs with I/O extension \rightarrow modules
- Extension with 2 external gateway modules
- Mini USB programming interface
- SD slot for program memory (memory card SP-COP-CARD can be ordered separately)
- Terminals are included in the scope of delivery

OVERVIEW OF DEVICES | PART NUMBERS

Type	Rated voltage	Terminals	Remarks	Part no.	P.U.
SP-COP1-A	24 V DC	Screw terminals, pluggable		R1.190.1110.0	1
SP-COP1-P-A	24 V DC	Screw terminals, pluggable	PLUS: press, motion, analog	R1.190.1130.0	1
SP-COP1-C	24 V DC	Push-in terminals, pluggable		R1.190.1120.0	1
SP-COP1-P-C	24 V DC	Push-in terminals, pluggable	PLUS: press, motion, analog	R1.190.1140.0	1

TECHNICAL DATA

Function	Safety control
Function display	24 LED green (in-/outputs) 3 LED green/red/yellow (module status)
Supply circuit	
Operating voltage range	16.8 V DC to 30 V DC
Rated power	3.5 W
Electrical isolation supply circuit - control circuit	No
Safe input circuit I_n	
Quantity/type	20 / digital
Primary voltage range	15 V DC to 30 V DC
Nominal current	2 mA
Safe output circuit Q_n	
Quantity/type	4 / digital
Rated output voltage	24 V DC
Output current per output	4 A
Short-circuit protective device	Yes
Interfaces	
USB Mini interface	Yes
Ethernet interface	No
Industrial Ethernet protocol (basis module)	No
Industrial Ethernet protocol (with gateway module)	ETHERCAT, PROFIBUS DP, CANopen
Program memory	External
General data	
Protection class as per DIN EN 60529 (housing/terminals)	IP20
Air and creepage distances	EN 60664-1
Ambient temperature / storage temperature	-25 °C - +65 °C / -25 °C - +75 °C
Standards	EN 61508, EN 60204, EN 62061, EN ISO 13849-1, EN 81-20/50, EN 692, EN 693, EN/IEC 61511, EN 50156-1
Approvals	TÜV, cULus

SP-COP2

COMPACT MODULE WITH ETHERNET

APPLICATIONS

- Machine building industry
- Presses
- Combustion plants
- Elevators and escalators
- SIL_{CL} 3 (EN 62061-1)
- PL e / Kategorie 4 (EN ISO 13849-1)

MERKMALE

- 16 inputs, 4 outputs, 4 configurable I/O on basic module
- 112 safe inputs and 56 outputs with I/O extension module
- Extension with 2 external gateway modules
- Industrial Ethernet protocols on basic module
- Ethernet interface for programming
- Mini USB programming interface
- SD-Slot für Programmspeicher (Speicherkarte SP-COP-CARD separat bestellbar)
- Terminals are included in the scope of delivery

Approvals	cULus

GATEWAY

With the samos®PRO gateways, system information can be transferred between the samos®PRO safe control and an industrial control, a visualization system or a PC.

APPLICATION EXAMPLES:

- Direct HMI connection
- Remote diagnosis and programming
- Read and write 50 byte
- Input and output states
- Configuration data
- Process data from the PLC
- Fault data (e.g. fault data of the connected sensor technology)

SP-CANOPEN

FEATURES

- Fieldbus protocol CANopen
- Bidirectional communication with PLC
- Transfer rate up to 1 MBit/s
- Transfer of 50 bytes of data
- Simple configuration with samos®PLAN 6
- Extended diagnosis and future compatibility (R1.190.0210.1)
- Note: for backward compatibility and existing projects please use R1.190.0210.0

SP-PROFIBUS-DP

FEATURES

- Fieldbus protocol PROFIBUS-DP
- Bidirectional communication with PLC
- Transfer rate 12 MBaud
- Transfer of 50 bytes of data
- Simple configuration with samos®PLAN 6
- Extended diagnosis and future compatibility (R1.190.0190.1)
- Note: for backward compatibility and existing projects please use R1.190.0210.0

SP-EN-ETC

FEATURES

- EtherCAT industrial Ethernet protocol
- Bidirectional communication
- Transfer of 50 bytes of data
- Simple configuration with samos® PLAN 6

OVERVIEW OF DEVICES | PART NUMBERS

Type	Rated voltage	Remark	Part no.	P.U.
SP-CANopen	24 V DC	CANopen with extended diagnosis (with SP-COPx starting version D-xx)	R1.190.0210.1	1
SP-PROFIBUS-DP	24 V DC	PROFIBUS DP with extended diagnosis (with SP-COPx starting version D-xx)	R1.190.0190.1	1
SP-EN-ETC	24 V DC	ETHERCAT	R1.190.0160.0	1

STARTER SET & ACCESSORIES

SAMOS®PRO COMPACT STARTER SET

- A safe way to get started
- Contains all required components
- With programming tool samos®PLAN 6

SP-COP-STARTER-SET:

Set including SP-COP2-EN-A, SP-COP-CARD1, SP-PLAN6, SP-CABLE-USB1, SP-CABLE-ETH1

SP-COP-CARD1

SP-CABLE-USB1

SP-CABLE-ETH1

SAMOS®PRO ACCESSORIES

Contents of the starter set

- SP-COP-CARD1: Memory-card for SP-COP
- SP-CABLE-USB1: USB cable for SP-COP, 1.8 m
- SP-CABLE-ETH1: Ethernet cable for SP-COP, 2 m
- Programming software samos®PLAN 6

You can get the free programming tool samos®PLAN 6 at www.wieland-electric.com

samos®PRO

SAMOS® – SAFETY MADE SIMPLE

samos® stands for SAFETY MOdular System. The safety system with just a multifunctional, permanently coded basic modules is built on the modular kit principle and grows module by module along with the safety task.

- samos® combines a wide variety of safety sensors which monitor a machine or system for technical safety either individually, in combination or all together.
- samos® replaces special devices with pre-defined, practice-oriented function blocks for monitoring emergency stop, position switches, two-hand buttons and light curtains, for example.
- samos® uses safe logical link functions for simple creation of dependent or independent safety zones.
- samos® offers comprehensive diagnosis by gateways via Profibus-DP, CANopen and DeviceNet or via Industrial Ethernet.

All safety functions are set with a screwdriver without programming software and can be read at the device.

EXAMPLE: SINGLE FUNCTIONS

-  Emergency stop
-  Safety door
-  Controlled stopping
-  Monitoring BWS type 4
-  Monitoring BWS type 2 with testing
-  Testable PDF sensors
-  Safe position monitoring
-  Static valve monitoring
-  Two-hand applications to IIIA and IIIC
-  4-wire switching mats

Set release delay of output Q4 or Q3 and Q4

EXAMPLE: COMBINATION FUNCTIONS

-  TYPE 4/2
-  TYPE 4/2
-  TYPE 4/2
-  TYPE 4/2

EXAMPLE: DUAL FUNCTIONS

-  TYPE 4/2
-  TYPE 4/2

EXAMPLE: SPECIAL FUNCTIONS

-  MAX. 5 s Jog mode
-  SETUP Setup mode
-  MUTING MUTING and BYPASS

SAMOS[®] – MAXIMUM FLEXIBILITY

INTELLIGENTLY CONNECTED MODULES

The modules are connected to a standard DIN rail and pressed together. Connected on the left of the rail is the Master, the obligatory base module (with coding 1), input modules (coding matches the base module arranged to the left) and relay output modules. All modules in the samos overall system are permanently coded and are always permanently assigned to a similarly permanently coded basic module, which eliminates any confusion during service work, for instance.

The relay modules are integrated in the function via external wiring. If necessary such system group are made up of basic modules, input modules and relay output modules can be wired together. This allows the implementation of a wide variety of input/output functions with separate or combined effects.

FUNCTIONS WITH ADDED VALUE

The functions of the basic module and the input modules are set either individually or in combination on the front with 10-position rotary switches (e.g. emergency stop and protective door monitoring with controlled shutdown). Additional functions such as automatic reset, startup and re-startup blocking or retriggering of the off-delay are implemented with terminal configuration.

samos[®] MODULES

Clear handling – maximum flexibility

The clear and simple user interface helps to implement safe solutions.

MODULAR DESIGN

In its maximum configuration **samos**[®] consists of one basic master module and additional modules to expand function blocks, inputs and outputs.

- Up to **12** safe active modules (input modules)
- Up to **4** additional safe passive output module relays
- **1** additional gateway

- 1 Basic master module**
 Safety module with 9 function blocks, 8 safe inputs and 4 safe outputs (also suitable for stand-alone operation)
- 2 Input module**
 Expansion module with 10 function blocks and 8 safe inputs
- 3 Output module relay**
 Expansion modules with 2 or 4 safe, potential-free relay contacts
- 4 Gateway**
 Fieldbus or Ethernet gateways for easy diagnosis of the **samos**[®] system

SA-BM

BASIC MODULE

APPLICATIONS

- Machine building industry
- Combustion plants
- SIL_{CL} 3 (EN 62061-1)
- PL e / Category 4 (EN ISO 13849-1)

FEATURES

- 9 function blocks
- 4 inputs for safety sensors
- 4 safe semiconductor inputs
- Adjustable OFF- delay

GATEWAY

With the samos® gateways, system information can be transferred from the configurable samos® safety system to an industrial control or a visualization system, for example

APPLICATION EXAMPLES:

- Input and Output states
- Configuration data
- Fault data (e.g., configuration faults, faults during operation)

SA-PROFIBUS-DP

FEATURES

- Fieldbus protocol PROFIBUS-DP
- Communication with PLC
- Transfer rate up to 12 MBaud
- 4 semi-conductor outputs on board

SA-CANOPEN

FEATURES

- Fieldbus protocol CANopen
- Communication with PLC
- Transfer rate up to 1 MBit/s
- 4 semi-conductor outputs on board

samos®

SAFE RELAY – UNIVERSAL SAFETY RELAYS

The safeRELAY safety relays offer customized solutions for the safety of man and machine.

These devices combine excellent technical performance with efficient use in everyday industrial applications. Compact design, flexible use and flexible connection methods are the decisive advantages of these devices.

Depending on the application and the selected device, the safety relays can be used up to PL e / Category 4 (EN ISO 13849-1) or SIL 3 (EN 62061).

VERSATILE APPLICATION OPTIONS

- Emergency stop monitoring
- Monitoring of protective doors and interlocks
- Light curtain monitoring
- Two-hand relay
- Monitoring of valves and limit value switches
- Safe contact expansions

Further informations about the screw terminal set and the push-in terminal set see page 21.

safeRELAY

Safety relays

The simple and safe connection for every situation.

SNA, SNO, SNS, SNT, SNZ

Basic devices

The basic devices of the SNA, SNO, SNS, SNT and SNZ device families feature a safe internal logic component for the monitoring of the respective safety functions.

SNV

Basic devices with time function

The basic devices of the SNV device families feature a safe internal logic component for the monitoring of the respective safety functions.

In addition, these devices offer time-delayed, safe outputs and a corresponding time setting on the device.

SNE

Contact expansion relays

The contact expansion relays of the SNE device family feature a redundant internal structure and are used for contact multiplication on, for example, basic devices.

SNO 4083KM

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Up to PL e/ Catégorie 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Two-channel control with NC/NC or NC/NO
- Manual or automatic start
- SafeStart
- Cross monitoring
- Synchronous time monitoring for two-channel control
- 3 enabling current path / 1 signalling current path

FUNCTION

After the supply voltage is applied to terminals A1/A2 and the safety inputs are closed, the enabling current paths (NO contacts) are closed and the signal current path (NC contact) is opened automatically or by pressing the reset button (manual monitored start). When the safety inputs are opened/ de-energized the enabling current paths (NO contacts) are opened immediately and the signal current path (NC contact) is closed.

- **Reduced installation work** – The SNO 4083KM requires fewer connection cables, irrespective of whether operation with or without cross monitoring is desired. This saves time and money when it comes to wiring.

- **Universal application** – The two-channel control of the device is carried out by either an NC/NC or an NC/NO combination of the safety sensor. In the case of two-channel control of the device, a synchronous time is automatically monitored between the two channels.
- **SafeStart function** – When the device is used with a manual start, the reset input is automatically monitored for a rising and falling signal edge. A manual reset signal is only accepted if the control inputs of the device are activated by the safe transducer (e.g. emergency stop button) during the entire activation procedure.
- **Monoflop function** – This function is integrated into the device and prevents device interlocking under all circumstances. This is a decisive advantage in applications where very short interruptions of the safety-related signals can occur, or in the case of transducers with bouncing contacts or safe optical sensors (BWS), for example.
- **Simple diagnosis** – The device features an intelligent display system that shows the user the different operating modes of the device in its different applications. This means, for example, that when the control inputs are closed and manual start has been selected, a reset signal is displayed, which has not yet been given. Fault states in the control (e.g. synchronous time exceeded or a short-circuit in two-channel control) are also signaled to the user via a blinking code.

SNO 4062K/KM

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Reset button monitoring
- Manual or automatic start
Single-channel or two-channel control
- Cross monitoring
- 2 enabling current paths, 1 signal current path

FUNCTION

SNO 4062K

The device is a two-channel switching device for emergency stop applications with self-monitoring on each ON-OFF cycle. It complies with EN 60204-1 and is equipped with forcibly guided relays.

BASIC FUNCTION:

With supply voltage applied to terminals A1/A2 and the safety inputs closed, pressing the reset button closes the enabling current paths (manual start). When the safety inputs are opened/de-energized the enabling current paths will open.

- **Manual start** When the safety inputs are closed, a button is used to open reset input S34 (triggering with falling edge) or to close reset input S35 (triggering with rising edge).
- **Automatic start** Reset input S35 is connected to S33. The device starts with the rising edge of the signal on safety input S12.

SNO 4062KM

The function of this device corresponds to that of the SNO 4062K without synchrocheck. The device is suitable for connecting to light curtains for Type 4 (EN 61496-1) and connecting to short-circuit forming 4-wire safety mats, switching strips or switching edges (without monitoring resistance).

- **Safety mats** The device must be operated with two channels and cross monitoring. If there is resistance $< 50 \Omega$ / channel and a short circuit between the channels (S11/S12 and S21/S22) the enabling paths open and the SUPPLY LEDs flashes.
- **Light curtain for Type 4 (EN 61496-1)** The device will be operated with two channels and without cross monitoring, if the light curtain connected to the OSSD detects a shunt fault on its own.

For applications with tactile operating modes (rapid ON-OFF cycles, for example with manual supply) we recommend using SNO 4062KM.

Response time t_{A1} / t_{A2}		40 ms / 500 ms (KM: 40 ms / 80 ms)
Minimum ON time t_M		50 ms
Recovery time t_W		150 ms
Release time t_R		< 25 ms
Synchronous time t_S		200 ms (CH1 → CH2)
Permissible test pulse time t_{TP}		< 1ms
Max. resistivity, per channel ¹⁾		$\leq (5 + (1.176 \times U_B / U_N - 1) \times 100) \Omega$
Output circuit		
Enabling paths	13/14, 23/24	normally open contact
Signaling paths	31/32	normally closed contact
Contact assignment		forcebly guided
Contact type		Ag-alloy, gold-plated
Rated switching voltage	enabling / signaling path	230 V AC
Max. thermal current I_{th}	enabling / signaling path	6 A / 3 A
Max. total current I^2 of all current path	($T_u = 55^\circ\text{C}$)	9 A^2
Application category (NO)	AC-15	$U_e 230 \text{ V}, I_e 3 \text{ A}$
	DC-13	$U_e 24 \text{ V}, I_e 2.5 \text{ A}$
Short-circuit protection (NO), lead fuse / circuit breaker		6 A class gG / melting integral < 100 A^2s
Mechanical life		10^7 switching cycles
General data		
Creepage distances and clearances between the circuits		EN 60664-1
Protection degree according to EN 60529 (housing / terminals)		IP40 / IP20
Ambient temperature / storage temperature		$-25^\circ\text{C} - +55^\circ\text{C} / -25^\circ\text{C} - +75^\circ\text{C}$
Wire ranges screw terminals,	fine-stranded / solid	$1 \times 0.2 \text{ mm}^2 - 2.5 \text{ mm}^2 / 2 \times 0.2 \text{ mm}^2 - 1.0 \text{ mm}^2$
	fine-stranded with ferrules	$1 \times 0.25 \text{ mm}^2 - 2.5 \text{ mm}^2 / 2 \times 0.25 \text{ mm}^2 - 1.0 \text{ mm}^2$
Permissible torque		0.5 - 0.6 Nm
Wire ranges push-in terminals		$1 \times 0.25 \text{ mm}^2 - 1.5 \text{ mm}^2$
Weight	24 V AC/DC device / AC device	0.21 kg
Standards		EN ISO 13849-1, EN 62061
Approvals		DGUV, cULus, CCC

¹⁾ If two-channel devices are installed as single channel, the value is halved.

SNO 4063K/KM

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Up to PL e/Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Manual or automatic start
- Cross monitoring
- Single-channel or two-channel control
- 3 enabling current paths

FUNCTION

SNO 4063K

The device is a two-channel switching device for emergency stop applications with self-monitoring on each ON-OFF cycle. It complies with EN 60204-1 and is equipped with forcibly guided relays.

After supply voltage has been applied to the A1/A2 terminals and the safety inputs have been closed, pressing the reset button closes the enabling current paths (manual start). When the safety inputs are opened/de-energized the enabling current paths will open.

- **Manual start** When the safety inputs are closed, a button is used to open reset input S34 (triggering with falling edge) or to close reset input S35 (triggering with rising edge).
- **Automatic start** Reset input S35 is connected to S33. The device starts with the rising edge of the signal on safety input S12.

SNO 4063KM

The function of this device corresponds to that of the SNO 4063K. The device is suitable for connecting to light curtains for Type 4 (EN 61496-1) and to short-circuit forming 4-wire safety mats, switching strips or switching edges (without monitoring resistance).

- **Safety mats** The device must be operated with two channels and cross monitoring. If there is resistance $< 50 \Omega$ / channel and a short circuit between the channels (S11/S12 and S21/S22) the enabling paths open and the SUPPLY LEDs flash.
- **Light curtain for Type 4 (EN 61496-1)** The device will be operated with two channels and without cross monitoring, if the light curtain connected to the OSSD detects a shunt fault on its own.

For applications with tactile operating modes (rapid ON-OFF cycles, for example at manual supply) we recommend the use of SNO 4063KM.

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Up to PL e/ Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Automatic start
- Manual reset without monitoring
- Cross monitoring
- 3 to 4 enabling current paths

FUNCTION

Emergency stop and safety gate monitor The safety switching devices of our SNA product line are used to monitor safety sensors (emergency stop buttons, safety gate switches, etc.), feature a large number of safety switching contacts (3 NO contacts/1 NC contact or 4 NO contacts) with a total width of only 22.5 mm at a constant current of up to 8 A. They can be implemented in the extended temperature range up to 65° C.

- **Automatic start** – Reset input S34 is connected to safety input S11. To monitor external contact blocks (EDM), their NC contacts must be connected in series between S34 and S11.
- **Manual start without monitoring** – Reset input S34 is connected to safety input S11 via a RESET button. To monitor external contact blocks (EDM), their NC contacts must be connected to the RESET button in series.
- **Monitoring of light curtains** – The KM device types are especially suitable for the monitoring of very fast tactile switching operations, for example in safety light curtain applications. Very short switch-off procedures of a few milliseconds are detected reliably and lead to the switching off of the internal relays.

SNA 4063K/KM, SNA 4064K/KM

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS

APPLICATIONS

- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Manual reset with monitoring
- Cross monitoring
- 3 to 4 enabling current paths

FUNCTION

After the supply voltage is applied to terminals A1/A2 and the safety inputs are closed, the enabling current paths (NO contacts) are closed and the signal current path (NC contact) is opened by pressing the reset button (manual start with monitoring). When the safety inputs are opened/de-energized, the enabling current paths (NO contacts) are opened immediately.

- **Manual start with monitoring** – Reset input S34 is connected to safety input S11 via a RESET button. To monitor external contact blocks (EDM), their NC contacts must be connected in series to the RESET button.
- **Monitoring of light curtains** – The **KM device types** are especially suitable for the monitoring of very fast tactile switching operations, for example in safety light curtain applications. Very short switch-off procedures of a few milliseconds are detected reliably and lead to the switching off of the internal relays.

SNO 4003K

MONITORING OF EMERGENCY STOP AND SAFETY GATES

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Up to PL d / Category 3 (EN ISO 13849-1)*
- Up to SIL_{CL} 2 (EN 62061)*

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Manual or automatic start
- 3 enabling current paths, 1 signal current path
- Feedback loop for monitoring external contactors

* PL_e contact expansion

FUNCTION

The device is a single-channel switching device for emergency stop applications with self-monitoring on each ON-OFF cycle. It complies with EN 60204-1 and is equipped with forcibly guided relays.

The device has either two Y2 reset inputs (without reset monitoring) or two Y3 reset inputs (with reset monitoring). The K1 and K2 relays are actuated either automatically (bridge Y1 Y2) or after the reset button (on Y1 Y3) has been pressed. They become self-locking through their own contacts, if there is an electrical connection between terminal A1 and the supply voltage (emergency stop button, position switches).

After this switch-on phase the enabling current paths are closed and the signaling current path is open.

If the electrical connections between terminal A1 and the supply voltage are interrupted, the enabling current paths open and the signaling current path closes. The energized state (self-locking) of the two channels is indicated by a green LED K1, K2. The second green LED indicates that supply voltage has been applied. The set-up of an emergency stop facility after stop Category 0 (EN 60204-1) is possible.

SNO 1012K

MONITORING OF EMERGENCY STOP AND SAFETY GATES

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Up to PL d / Category 3 (EN ISO 13849-1)
- Up to SIL_{CL} 2 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Manual or automatic start
- 2 enabling current paths
- Check of external contactors (EDM)
- Compact design

FUNCTION

After the operating voltage (L+/L1) is applied via an unactuated emergency stop button or safety gate contact on A1 and A2, the device can be switched on via a Y1/Y2-connected reset button. When the device is on, the internal relays K1 and K2 are energized and the enabling current paths 13/14 and 23/24 are closed. When the emergency stop button or the safety gate contact is actuated, the current supply of the internal relays is interrupted and the enabling current paths are opened.

Permissible torque		0.5 - 0.6 Nm
Wire ranges push-in terminals		$2 \times 0.25 \text{ mm}^2 - 1.5 \text{ mm}^2$
Weight		0.12 kg
Standards		EN ISO 13849-1, EN 62061
Approvals		TÜV, cULus, CCC

SNS 4074K / SNS 4084K

STANDSTILL MONITOR

APPLICATIONS

- Standstill monitoring
- Monitoring of electrical lockout devices
- Control of spring-actuated tumblers
- Monitoring of low rotational speeds in setup operation
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Reliable monitoring of dynamic input signals
- Adjustable monitoring frequency 0.1 – 99 Hz
- 4 selectable operating mode groups
- Single-channel or two-channel control
- Manual or automatic start
- Cross monitoring
- 4 safe semi-conductor outputs

STANDSTILL MONITORING FUNCTION

The SNS 4084K standstill monitor provides for the safe monitoring of the frequency of a signal at inputs I1 to I4 of the device. If the frequency of the impulses is higher than the frequency set at the rotary switches (0.1 – 99 Hz), outputs Q1/Q2 will switch off. This monitoring function can be used to detect the standstill or a lower, safer rotational speed of a machine.

In applications of this sort, a spring-actuated or magnet-actuated tumbler of an electric interlocking device, for example, can be controlled from the output of the device.

The sensors for the detection of movement can, for example, be two inductive proximity switches or a rotary encoder connected to inputs I1 - I4. The frequency of the impulses to be monitored is set at the two rotary switches and splitter input T1, and is stored in the device on which the ENTER button is pressed while the voltage is applied to the device.

SNS 4074K

The device features a bypass input, which allows safety-oriented bypassing of the monitoring function, e.g. when a safe position has been reached. In this case, the signal must fulfill at least the safety category of the selected monitoring function.

SNS 4084K

The device features an input for the implementation of a start override, which allows the safe outputs to be switched off even during machine standstill. This means, for example, that a spring-activated protective locking facility can be activated during machine start-up.

CIRCUIT DIAGRAM

Terminals	Description
A1	+ 24 V
A2	GND
X1 / X2	Signal output, semi-conductor (plus switching)
S1	Configuration input for operating mode group
S2	Configuration input for operating mode group
I1	Sensor input
I2	Sensor / configuration input (depending on the operating mode group)
I3	Sensor / configuration input (depending on the operating mode group)
I4	Sensor / configuration input (depending on the operating mode group)
I5	Reset input
I6	Bypass input (SNS 4074K) / start override input (SNS 4084K)
Q1 / Q2	Safe Output, semi-conductor (plus switching)
Q3 / Q4	Safe Output, semi-conductor (plus switching), inverted

SVM 4001K

STANDSTILL MONITOR

APPLICATIONS

- Standstill monitoring
- Monitoring of electrical lockout devices
- Control of spring-actuated tumblers
- Monitoring of low rotational speeds in setup operation
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Sensorless monitoring of 1-phase and 3-phase motors
- Safe, configurable voltage monitoring
- Automatic operation

FUNCTION

The SVM 4001K device monitors machines, the 3-phase powered drive units of which have no movement detection sensors.

When the drives are set in motion or if faults are detected, the standstill monitor relay assumes the rest position.

APPLICATION

SNT 4M63K

MONITORING OF EMERGENCY STOP AND SAFETY GATES

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Manual or automatic start
- Cross monitoring
- 3 enabling current paths (NO contact, forcibly guided)
- Feedback loop for monitoring external contactors

FUNCTION

The device is a two-channel switching device with self-monitoring on each ON-OFF cycle. It complies with EN 60204-1 and is equipped with forcibly guided relays. It is intended for monitoring connected switching elements on separating safety devices and generating a safety-oriented signal (enable). Depending on the design, separating safety devices may include sliding safety gates, safety gates, housings, covers, sheetings, screens, etc.

BASIC FUNCTION

With supply voltage applied to terminals A1/A2 and the safety inputs closed, pressing the reset button closes the enabling current paths (manual start). When the safety inputs are opened the enabling paths will open.

- **Manual start** – When the safety inputs are closed, a button is used to close reset input S34 and open it again (triggering with falling edge) or to close reset input S35 (triggering with rising edge).
- **Automatic Start** – Reset input S35 is connected to S33/S14. The device starts with the rising edge of the signal on safety input S14.

¹⁾ If two-channel devices are installed as single channel, the value is halved.

SNZ 4052K

TWO-HAND RELAY TYPE IIIC

APPLICATIONS

- Protection of people and machinery
- Monitoring of two-hand applications
- Press
- According to EN 574 Type IIIC
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Two-channel actuation; 1 NO contact and 1 NC contact for each channel
- Cross monitoring
- Monitoring of synchronous activation
- 2 enabling current paths, 1 signaling current path

FUNCTION

The device complies with EN 574 Type III C safety requirements. The safety behavior of the device is designed for applications according to Category 4 (EN 954-1). The device is single-fault safe and self-monitoring. Synchronous activation of both actuators (two-hand momentary contact or safety gate contacts) is monitored. Each of the two actuators is connected to the device with an NO contact and an NC contact. The technical design of the input circuit provides cross connection and ground fault monitoring. The output function is designed with 2 NO contacts as an enabling current path and 1 NC contact as signaling current path (all forcibly guided).

With supply voltage applied to terminals A1/A2 and the feedback loop (terminals Y1/Y2) closed, the enabling current paths are closed by simultaneously activating the actuators (S1+S2).

Both actuators must be activated within 0.5 s for the output contacts to be enabled. If only one of the two actuators is released, the device is immediately de-energized. The enabling current paths open.

The device can be restarted only after both actuators have returned to their initial position (for example when the two-hand momentary contact switches have been released) and the feedback circuit is closed again. The feedback circuit should only be opened again after both actuators are activated. Otherwise the device will remain in the OFF position. The current status of the device is indicated by 3 LEDs: application of the supply voltage with LED SUPPLY, activation of both actuators with LED K1 and additionally with LED K2 in case of synchronous activation.

SNZ 1022K

TWO-HAND RELAY TYPE IIIA

APPLICATIONS

- Protection of people and machinery
- Monitoring of two-hand applications
- According to EN 574 Type IIIA
- Up to PL c / Category 1 (EN ISO 13849-1)
- Up to SIL_{CL} 1 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Two-channel actuation; 1 NO contact and 1 NC contact for each channel
- Cross monitoring
- Monitoring of synchronous activation
- 1 changeover contact

FUNCTION

After the power supply is established at terminals A1/A2 the release current paths are closed when the actuators (S1+S2) are operated at the same time. The two actuators must be operated within 0.5 s to trigger a release. If just one of the two actuators is released, the device is immediately de-energized and the enabling current path is opening.

The device can only be restarted once the two actuators are returned to their initial positions (e.g. the two-hand buttons have been released). The current status of the device is shown by 2 LEDs. The presence of the power supply is indicated with the SUPPLY LED, the operation of the two actuators with the K1 LED, if there is synchronous operation.

Enabling paths	11/12/14	changeover contact
Contact type	Ag-alloy, gold-plated	
Rated switching voltage	230 V AC	
Max. thermal current I_{th}	enabling path 10/12	6 A
Application category (NO)	AC-15	$U_e 230$ V, $I_e 3$ A
	DC-13	$U_e 24$ V, $I_e 2$ A
Short-circuit protection (NO), lead fuse / circuit breaker	6 A class gG / melting integral < 100 A ² s	
Mechanical life	10 x 10 ⁶ switching cycles	
General data		
Creepage distances and clearances between the circuits	EN 60664-1	
Protection degree according to EN 60529 (housing / terminals)	IP40 / IP20	
Ambient temperature / storage temperature	-25 °C - +55 °C / -25 °C - +75 °C	
Wire ranges screw terminals,	fine-stranded / solid	1 x 0.2 mm ² - 2.5 mm ² / 2 x 0.2 mm ² - 1.0 mm ²
	fine-stranded with ferrules	1 x 0.25 mm ² - 2.5 mm ² / 2 x 0.25 mm ² - 1.0 mm ²
Permissible torque	0.5 - 0.6 Nm	
Wire ranges push-in terminals	2 x 0.25 mm ² - 1.5 mm ²	
Weight	24 V AC/DC device / AC device	0.1 kg
Standards	EN ISO 13849-1, EN 62061, EN 574	
Approvals	TÜV, cULus, CCC	

SNV 4063KL

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS, OFF-DELAYED

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Termination of braking operations through OFF-delay time
- Control of solenoid-actuated interlocks
- Up to PL e / Category 4 (EN ISO 13849-1) for undelayed contacts
- Up to PL d / Category 3 (EN ISO 13849-1) for delayed contacts
- Up to SILCL 3 (EN 62061)

FEATURES

- Stop category 0/1 according to EN 60204-1
- Single-channel or two-channel control
- Manual or automatic start
- OFF-delay time adjustable in the range 0.15 to 3s or 1.5 to 30s
- Reset button monitoring, cross monitoring, monitoring of synchronous time
- 3 enabling current paths (2 undelayed, 1 OFF-delayed)

FUNCTION

With the supply voltage applied to terminals A1/A2 and the emergency set right and left margins in-line button. This controls relays K1 to K4, which become self-locking (when starting via reset button monitoring after the response time). After this switch-on phase the 3 enabling current paths are closed (terminals 13/14, 23/24 and 37/38). Three LEDs display the state of relays K1/K2, K3/K4 and the supply voltage.

If the emergency stop button is activated, the current supplies for relays K1 to K4 are interrupted. The undelayed enabling current paths (terminals 13/14, 23/24) are opened with release time t_{R1} while the off-delayed enabling current path (terminals 37/38) is opened after the pre-set OFF-delay time t_{R2} . The OFF-delay time can be adjusted infinitely in the range 0.15 to 3 s or 1.5 to 30 s.

With a two-channel control and cross-monitoring wiring of the sensor circuit, additional errors such as short-circuit or ground fault can be detected. An electronic fuse protects the device against damage. After the cause of the malfunction has been removed, the device is operational again after approx. 3 s.

- **Reset button monitoring** – The device can be started either with the falling edge or with the rising edge (terminals S34 or S35). For emergency stop applications with manual start the button must be connected to terminals S33/S34. The device is enabled only with the falling edge of the reset signal. For starting, the reset button must be pressed and released. For safety gate applications in which an automatic start is performed it is necessary to bridge terminals S33/S35. The device will react at the rising edge of input S12 which is internally connected to S33.
- **Monitoring of synchronous time** – The use of safety limit switches for single-channel or two-channel circuits in safety gate applications depends on the required safety level. The device provides a monitoring of the synchronous time of two connected safety switches. A synchronous time $t_s \approx 0.5$ s requires limit switches positioned in such a way that channel 1, terminals S11/S12, closes before channel 2, terminals S21/S22. If channel 2 closes before channel 1, the synchronous time is $t_s = \infty$.

SNV 4063KP

MONITORING OF EMERGENCY STOP, SAFETY GATES AND LIGHT BARRIERS, ON-DELAYED

APPLICATIONS

- Protection of people and machinery
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of light barriers
- Monitoring of interlocking installation with position switches and integrated locking
- Control of spring-actuated interlocks
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Stop Category 0 according to EN 60204-1
- Single-channel or two-channel control
- Manual or automatic start
- ON-delay time adjustable in the range 0.15 to 3 s or 1.5 to 30 s
- Reset button monitoring, cross monitoring
- 3 enabling current paths (2 undelayed, 1 ON-delayed)

FUNCTION

With supply voltage applied to terminals A1/A2, relays K3 and K4 (terminals 37/38) start with the pre-selected ON-delay time. The ON-delay time t_{A1} can be adjusted infinitely in the range 0.15 to 3 s or 1.5 to 30 s according to the device type. The device is enabled by pressing the reset button. The following operating modes can be selected:

- **Manual start** – The reset button must be connected to S34 through terminal S33. For starting the relay, the reset button must be pressed. Relays K3 and K4 (terminals 37/38) will switch into the OFF position. With the falling edge of the reset signal, the reset is completed and activates relays K1 and K2, which become self-locking after the response time t_{A3} . After this switch-on phase, the 2 enabling current paths defined for the output are closed (terminals 13/14, 23/24). With the emergency stop command, the power supply to relays K1 and K2 is interrupted. The enabling current paths (terminals 13/14, 23/24) are immediately opened with release time t_R , and relays K3 and K4 will start after the pre-set ON-delay time t_{A1} , terminals 37/38. Three LEDs display the state of relays K1/K2, K3/K4 and the supply voltage.
- **Automatic start** – For monitoring of interlocking installations with locking mechanism or safety gate applications in which on automatic start shall be performed it is necessary to jumper terminals S33/S35. The device will react at the rising edge of input S12 that is internally connected to S33. Relays K3 and K4 (terminals 37/38) will switch into the OFF position. With the rising edge of input S12 the relay K1 is activated and response time t_{A2} started. When the time has elapsed, the 2 enabling current paths are closed (terminals 13/14, 23/24). With a stop command the power supply to relays K1 and K2 is interrupted. The enabling current paths (terminals 13/14, 23/24) are immediately opened with release time t_R , and relays K3 and K4 will start after the pre-set ON-delay time t_{A1} , terminals 37/38.

SNV 4274SL / SNV 4074ST – MONITORING OF EMERGENCY STOP, LIGHT BARRIERS AND SAFETY GATES, OFF-DELAYED/ON-DELAYED

APPLICATIONS

- Monitoring of limit values in the process industry
- Monitoring of emergency stop applications
- Monitoring of safety gates
- Monitoring of interlocks
- Monitoring of light barriers
- Up to PL e/ Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FEATURES

- Continuously adjustable, analog time setting
- Time ranges 3s, 30s or 300s
- Retriggering of the time delay possible
- Single-channel or two-channel control
- Manual or automatic start
- SafeStart
- Cross monitoring

OFF-DELAY WITH RETRIGGERING FUNCTION (SNV 4274SL)

After the supply voltage is applied to terminals A1/A2 and the safety inputs are closed, the contacts are switched on immediately, either automatically or by pressing the reset button (manual start). When the safety inputs are opened/de-energized, the contacts are switched off immediately or with a release delay.

The set release delay only expires if the safety inputs are opened longer than the release delay set on the device. If the safety inputs are closed again before the release delay has expired (retriggering), the delayed contacts will remain closed, too.

ON-DELAY FUNCTION (SNV 4074ST)

After the supply voltage is applied to terminals A1/A2 and the safety inputs are closed, the contacts are switched on immediately or with a response delay, either automatically or by pressing the reset button (manual start). When the safety inputs are opened/de-energized the contacts are switched off immediately.

Weight	0,33 kg / 0,35 kg		
Standards	EN ISO 13849-1, EN 62061, EN 50156-1		
Approvals	TÜV, GL, cULus, CCC		

¹⁾ If two-channel devices are installed as single channel, the value is halved.

SNE 1

CONTACT EXPANSION

APPLICATIONS

- Duplication of the enabling current paths of a basic device
- Contact expansion in safety-oriented systems
- Up to PL e / Category 4 (EN ISO 13849-1)*
- Up to SIL_{CL} 3 (EN 62061)*

FEATURES

- Stop Category 0 and 1 according to EN 60204-1
- Single-channel operation
- 2 changeover contacts (positively driven)
- Sturdy retaining bracket

* Depends on the category of the basic device or the safety control.

SNE 4003K

CONTACT EXPANSION

APPLICATIONS

- Duplication of the enabling current paths of a basic device
- Contact expansion in safety-oriented systems
- Contact expansion for light curtains
- Up to PL e/Category 4 (EN ISO 13849-1)*
- Up to SIL_{CL} 3 (EN 62061)*

FEATURES

- Single-channel or two-channel operation
- 3 enabling current paths (NO contact)
- 2 signaling current paths (NC contact)
- Wide input voltage range from 15 to 30 V DC
- Suitable for semiconductor outputs

* Depends on the category of the basic device or the safety control.

FUNCTION

The SNE 4003K is an expansion device for basic devices (such as safety switching devices, light curtains, laser scanners) that are part of the machine's safety equipment and are used for protecting people, materials and machines.

The device is designed with two channels and redundancy. There is basic insulation to separate the enabling current paths from one another and the control circuits from the signaling current paths. The broad input voltage range of 15 V DC to 30 V DC makes the SNE 4003K ideal for single-channel or two-channel control by semiconductors.

Input voltage to the SNE 4003K is connected via one or two enabling current paths of a basic device. When the input voltage is applied relays K1 and K2 switch into the ON position. After this switch-on phase, enabling current paths 13/14, 23/24, 33/34 are closed and feedback current path Y1/Y2 and signaling current path 41/42 are opened.

This is displayed through two LEDs, K1 and K2, which are assigned to relays K1 and K2. If the enabling current paths of the basic device are opened when the emergency stop button is pressed, relays K1 and K2 on the SNE 4003K switch back into the OFF-position. The enabling current paths open and the feedback current path closes. Feedback current path Y1/Y2 prevents the basic device from switching on again before K1 or K2 releases.

SNE 4004K/KV

CONTACT EXPANSION

APPLICATIONS

- Expansion of a basic device's enabling current paths
- Contact expansion in safety equipment
- Up to PL d / Category 3 (EN ISO 13849-1)*
- Up to SIL_{CL} 2 (EN 62061)*

FEATURES

- Stop Category 0 and 1 according to EN 60204-1 (see "Function")
- Single-channel or two-channel control
- SNE 4004K:
 - 4 enabling current paths, undelayed (NO contact)
 - 3 signaling current paths, undelayed (NC contact)
- SNE 4004KV:
 - 4 enabling current paths, OFF-delayed (NO contact)
 - 3 signaling current paths, OFF-delayed (NC contact), Time buffering

* Depends on the category of the basic device or the safety control.

FUNCTION

SNE 4004K

Supply voltage to the SNE devices is routed via an enabling current path of a basic device. When the supply voltage is applied relays K1 and K2 switch into the ON position. After this switch-on phase the four enabling current paths 13/14, 23/24, 33/34, 43/44 (of the SNE 4004K) or 17/18, 27/28, 37/38, 47/48 (of the SNE 4004KV) are closed and the feedback current path Y1/Y2 is open. This is displayed through two LEDs that are assigned to relays K1 and K2.

When the enabling current paths of the basic device are opened through the operation of the emergency stop button, relays K1 and K2 on the SNE 4004K switch back into the OFF-position. The enabling current paths open and the feedback current path closes. Feedback current path Y1/Y2 prevents the basic device from switching on again before K1 or K2 releases.

SNE 4004KV

The functions of this device correspond to those of the SNE 4004K. The SNE 4004KV is available with the following four OFF-delay times t_{r1} : 0.5 s; 1 s; 2 s and 3 s. The device has an OFF-delay time that is enabled through capacitors.

This causes the OFF-delay time t_{r1} to elapse completely even in case of failure of the power supply (A1/A2). It cannot be reset before it has elapsed. Once the delay time has elapsed, relays K1 and K2 switch into the OFF- position. OFF-delay times of > 0 s correspond to stop category 1.

SNE 4012K / SNE 4024K

CONTACT EXPANSION

APPLICATIONS

- Expansion of a basic device's enabling current paths
- Contact expansion in safety equipment
- Up to PL e / Category 3 (EN ISO 13849-1)*
- Up to SIL_{CL} 3 (EN 62061)*

FEATURES

- Stop Category 0 and 1 according to EN 60204-1 (see "Function")
- Single-channel control
- SNE 4012K: 2 enabling current paths (NO contact)
- SNE 4024K: 2x2 enabling current paths (NO contact)

* Depends on the category of the basic device or the safety control.

FUNCTION

Once the supply voltage has been applied to terminals B1/A2 (B2/A2), the enabling current paths (NOC) are automatically closed and the signaling current paths (NCC) are opened.

When the supply voltage is ceased, the enabling current paths (NOC) are immediately opened and the signaling current paths (NCC) are immediately closed.

SENSOR PRO – SAFE SIGNAL ACQUISITION

SLC + SLD SERIES

Safety light curtains

SLC series safety light curtains are ideal for realizing optoelectronic protective devices. The SLC series is used to safeguard hazard points, for area protection or access protection.

Safety light curtains

SLD series safety light grids are optoelectronic personal protective devices for access protection at hazard points on plant and machinery.

SENC SERIES

Safe rotary encoders

Safe rotary encoders for functional safety capture information about drive shaft position and angle in the form of increments. They offer users a higher resolution, simpler mounting and a more rugged construction than proximity sensors. Our safe rotary encoders offer redundancy and high diagnostic coverage, which the standard encoders are unable to realize, and hence achieve Kat 4, PL e und SIL 3.

SNH SERIES

Emergency stop buttons

SNH series emergency stop buttons ensure the safety of man and machine, and offer the user a practical, rugged and reliable design.

The quick and simple mounting of the emergency stop buttons saves time and money and the use of the highest-quality materials guarantees a long service life and reliable operation.

SNH series emergency stop buttons are suitable for numerous cross-sectoral applications.

SIN + SMS SERIES

Safety switches with guard control

SIN series safety switches are used for the position monitoring of movable guards and prevent the unintentional opening of safety doors and flaps via the integrated guard control.

Typical fields of application are machines with coasting movements, at which access is allowed to be granted only when the hazard has been eliminated.

Safety switches with separate actuator

SMS series safety switches are used for monitoring movable guards. They are suitable for both personal protection and process protection and available in three different versions.

SLS SERIES

Safe position switches

SLS series switches can be used for safe position monitoring. The switches can be actuated either by plunger or plastic roller.

STS + SMA SERIES

Non-contact safety switches

STS series contactless safety switches offer maximum manipulation protection and are used for the position monitoring of guards.

Magnetic safety switches

SMA series sensors are magnetic safety sensors and are used for contactless safety door and position monitoring. They have integrated manipulation protection and can be used up to IP67.

SERIES SLC

SAFETY LIGHT CURTAIN

APPLICATIONS

- Access protection (finger, hand and arm protection)
- Access security (personal protection)
- Horizontal zone protection

FEATURES

- Safety light curtain AOPD type 4 or type 2
- Beam resolution 14, 20, 30, 40 and 90 mm
- Protection field heights 150 – 1800 mm
- Extensive accessories

With 3-Zone alignment indication

FUNCTIONS SUITABLE FOR EVERY PROTECTION TASK

All important contactless safety functions on machines and equipment can be realized by means of the three function versions, Standard, Select and Professional of the SLC series.

ADVANTAGES

HIGHER EQUIPMENT AVAILABILITY

- Easy adjustment and stable operation through slim and rigid housing
- Parameterization without PC or DIP switch through simple wiring in the control cabinet
- The integrated Double-Scan technology avoids unwanted shutdown even in harsh operating conditions
- Clear diagnostic and status messages in the 7-segment display ensure shorter downtimes
- Cable lengths up to 100 m with unshielded connection cables ensure greater operational flexibility and reduce costs even under difficult EMC conditions

FASTER DURING COMMISSIONING, OPERATION AND SERVICE

- The 3-zone alignment indicator reduces assembly time and simplifies justage
- The wide range of SLC products permits optimal and cost-effective design of protective devices
- Easy to connect via standard M12 connection technology
- Fast installation and removal on the machine through a system configuration in the control cabinet
- Selectable transmission channels and range reduction prevent mutual interference
- Simplified planning of safeguards because every SLC safety light curtain from 0 m to the maximum range can be implemented

Finger, hand and arm protection on machines with the safety light curtain SLC

sensor PRO

SERIES SLD

SAFETY LIGHT GRID

PERSONAL PROTECTION FUNCTION

The SLD safety light grids are especially suitable for the contactless safeguarding of hazardous areas and for personal protection on machines and equipment.

ADVANTAGES

FASTER DURING COMMISSIONING, OPERATION AND SERVICE

- The integrated laser alignment aid (optional) permits precise mounting and reduces the startup times of the SLD system
- Parameterization without PC or DIP switch through simple wiring in the control cabinet
- Robust device columns with spring-loaded base mounting and integrated alignment aid are available for the free-standing implementation

APPLICATIONS

- Access security (personal protection)
- Safeguarding of hazardous areas

FEATURES

- Safety light grid AOPD type 4
- 1-, 2-, 3- and 4-beam resolutions
- Also available as an universal system, i.e. transmitter/receiver in a single unit
- High ranges up to 100 m can be implemented
- Extensive accessories

Integrated laser alignment aid

INCREASED RELIABILITY

- Robust aluminum housing in IP67
- Operating temperature range -30 °C to 55 °C permits implementation even in the harshest environments
- Multi-beam scanning avoids unwanted shutdown
- Mutual interference is avoided through the adjustable range reduction when implementing multiple systems

SERIES SLD

SAFETY LIGHT GRID

SLD STANDARD / SLD SELECT / SLD PROFESSIONAL

The safety light grid SLD Standard, SLD Select and SLD Professional each consist of a transmitter and a receiver unit and are thus suitable for highest ranges

- 1-, 2-, 3- and 4-beam systems
- Ranges up to 100 m

	SLD Standard	SLD Select	SLD Professional
LED display	●	●	●

Muting lamp integrated (optional)			●

SLD UNIVERSAL – LESS CABLING EXPENDITURE

The safety light grids consist of an integrated SLD universal transmitter/receiver unit and a passive reflector unit without electrical connection.

- 2- and 3-beam systems
- Range up to 8 m

SAFETY LIGHT GRID

TECHNICAL DATA		
Function	safety light grid	
Function display	LED	
Power supply circuit		
Rated voltage U_N	24 V DC	
Current consumption (transmitter)	50 mA	
Current consumption, no load (receiver/transceiver)	150 mA	
Operating voltage range U_B	0.8 - 1.2 x U_N	
Electrical isolation supply circuit - control circuit	no	
Protection field data		
	Beams	Range
	2	0.5 - 50 m / 20 - 70 m / 0.5 - 8 m
	3	0.5 - 50 m / 20 - 70 m / 0.5 - 6 m
	4	0.5 - 50 m / 20 - 70 m
Output circuit OSSD		
Number	2	
Type	Transistor outputs PNP	
Short-circuit monitoring	ja	
Switching current (max., per output)	380 mA	
Leakage current (max.)	200 μ A	
Switching voltage, high active ($U_B - 1V$)	18.0 - 27.8 V	
Switching voltage, low	0 - 2,5 V	
Line resistance / line length	< 200 Ω	
Response time	25 ms	
General data		
Creepage distances and clearances between the circuits	EN 60664-1	
Protection degree according to EN 60529	IP67	
Ambient temperature / storage temperature	-30 °C - +55 °C / -40 °C - + 75 °C	
Connection	M12 (5 pole / 8 pole) device-dependent	
Weight	1.4 - 2.2 kg, device-dependent	
Standards	EN 61496, EN ISO 13849-1, EN 62061	
Approvals	TÜV, c-CSA-us	

Note: For the connection of safety light grids SLD shielded cables are mandatory.

← Integrated muting and status indicator light

INTEGRATED MUTING – DECENTRALIZED SECURITY FUNCTION ON-BOARD

- Optional time- or sequence-controlled 2-sensor-muting
- Partial muting (the highest light beam stays active)
- Integrated muting/status indicator light

Multi-sided safeguarding of a sheet metal processing machine by SLD safety light grids and SLD deflection mirrors.

Safety light grids SLD Professional with time-controlled 2-sensor-muting at a packaging machine.

SLD – MUTING FUNCTIONS WITH SAMOS®PRO

SLD safety light grids are ideally suited for monitoring material locks, such as in the packaging industry, in combination with the freely configurable muting function blocks of samos®PRO, for example in the packaging industry.

SERIES SLC

MOUNTING ACCESSORIES

The swivel mount set **SLX-MO-RO2** is used for wall mounting of series SLC (360° horizontal adjustment possible).

SERIES SLD

MOUNTING ACCESSORIES

The swivel mount set **SLX-MO-RO-SET1** (**SLX-MO-RO-SET1S** with shock absorber) is used for wall mounting of Transmitter, Receiver and Transceiver from series SLD (240° horizontal adjustment possible).

The swivel mount set **SLX-MO-RO-SET2** (**SLX-MO-RO-SET2S** with shock absorber) is used for wall mounting of Mirror from series SLD (240° horizontal adjustment possible).

OVERVIEW OF DEVICES | PART NUMBERS

Type	Description	Part no.	P.U.
SLX-MO-RO2	Rotative bracket 360°, 2 pcs., inkl. 1 pcs. SLC cylinder	R1.591.0020.0	1
SLX-MO-RO2S	Rotative bracket 360°, vibration damped, 2 pcs., inkl. 1 pcs. SLC cylinder	R1.591.0021.0	1

SERIES SLC / SLD

MOUNTING ACCESSORIES

SLX-MO-L

SLX-MO-Z

SLX-MO-TNUT

SLX-MO-2RO3

SLX-MO-2RO3S

SLX-MO-RO270-S

SLX-MO-CLIP

The **SLX-MO-TNUT** sets including sliding blocks for mounting of series SLC/SLD.

The **SLX-MO-L** and **SLX-MO-Z** sets are used for wall mounting of series SLC/SLD in combination with sliding blocks SLX-MO-TNUT.

The new swiveling mounting brackets **SLX-MO-2RO3** (**SLX-MO-2RO3S** with shock absorber) are used for adjustable wall mounting.

The **SLX-MO-CLIP** is used for fixed mounting of series SLC/SLD in device columns SLX-COL.

The swiveling mounting brackets **SLX-MO-RO-S** and **SLX-MO-RO270-S** are used for mounting series SLC/SLD in device columns SLX-COL. These brackets are adjustable and with vibration damping.

SERIES SLC / SLD

MOUNTING ACCESSORIES

SLX-CAB-M12

CONNECTION CABLES SLC/SLD

The connection cables **SLX-CAB-M12** (shielded and unshielded) are used for the electrical connection of series SLC/SLD by M12-connector (5- or 8-pole). For the connection of safety light grids SLD shielded cables are mandatory.

SLC-PRO

PROTECTIVE SCREEN SLC

The protective screens **SLC-PRO** are used for the protection of the front of series SLC.

SLX-COLP-1900	2 protective glasses for SLX-COL device column; length: 1880 mm	R1.592.1900.0	1

SERIES SLD / SLC

OTHER ACCESSORIES

SLX-ACC-LASER

SLX-ACC-LASERCOL

The external laser-alignment device **SLX-ACC-LASER** (for direct mounting on series SLX/SLD) and **SLX-ACC-LASERCOL** (for mounting on a device column SLX-COL) are used for the adjustment of the optical system of series SLC/SLD.

SLX-ACC-TEST

The test rods **SLX-ACC-TEST** are used for functional testing of protective areas realized by series SLC.

OVERVIEW OF DEVICES | PART NUMBERS

Type	Description	Part no.	P.U.
SLX-ACC-LASERCOL	External laser adjustment device, for fixing in device column	R1.596.0003.0	1
SLX-ACC-LASER	External laser adjustment device	R1.596.0002.0	1
SLX-ACC-TEST2040	Test bar, 20/40 mm	R1.596.2040.0	1
SLX-ACC-TEST1430	Test bar, 14/30 mm	R1.596.1430.0	1
SLX-ACC-MKEY	Magnet key for activation of laser adjustment device	R1.596.0001.0	1

SERIES SLC / SLD

MUTING ACCESSORIES

SLX-MUTC-SET2P

The Muting-Set **SLX-MUTC-SET2P** is used for realizing a 2-sensor cross muting e.g. in combination with device columns SLX-COL to be ordered separately or directly onto the SLD safety light grids.

The Muting-Set **SLX-MUTC-SET4** (no figure) is used for realizing a 4-sensor-sequence-muting, e.g. in combination with device columns SLX-COL to be ordered separately or directly onto the SLD safety light grids.

The **SLX-MUTC-SET2A** or **SLX-MUTC-SET2B** muting sets (see figure below) are used to set-up a 2-sensor sequential muting system, e.g. in combination with the SLX-COL device columns to be ordered separately, or directly onto the SLD safety light grids.

SLX-ACC-CONF1	Display and acknowledgment unit	R1.596.0005.0	1
SLX-ACC-CONF	Display and acknowledgment unit, 2x connection cable M12	R1.596.0004.0	1

SLC/SLD SERIES

ACCESSORIES FOR CASCADING

The **SLX-CAS-MO1** angle bracket permits a mechanically stable and simple connection between the cascading SLC light curtains (90° connection).

SLX-CAS-MO1

SLX-CASPLUG

If the cascading SLC light curtains are to be used individually (i.e. not cascaded), corresponding **SLX-CASPLUG** terminating plugs must be attached to the connection cables.

OVERVIEW OF DEVICES | PART NUMBERS

Type	Description	Part no.	P.U.
SLX-CAS-MO1	L-angle bracket, 1 piece, incl. screws, shims and slot nuts	R1.598.0006.0	1
SLX-CAS-MO2	L-angle bracket, 2 pieces, incl. screws, shims and slot nuts	R1.598.0007.0	1
SLX-CASCAB1	Host/Guest extension cable, length 2 m	R1.598.0001.0	1
SLX-CASCAB2	Host/Guest extension cable, length 5 m	R1.598.0002.0	1
SLX-CASPLUG-T	Terminating plug for SLC transmitter host devices	R1.598.0003.0	1
SLX-CASPLUG-R	Terminating plug for SLC receiver host devices	R1.598.0004.0	1
SLX-CASPLUG-TR	Terminating plug set for SLC transmitter and receiver host devices	R1.598.0005.0	1

SERIES SENC

SAFE HTL INCREMENTAL ENCODER

SENC-58H WITH HOLLOW SHAFT

SENC-58S WITH SOLID SHAFT

APPLICATIONS FOR SAMOS®PRO COMPACT PLUS

- Safe monitoring of motors, drives or shafts
- Rotational speed, rotational direction or position monitoring to EN/IEC 61800-5-2
- Shutdown monitoring for commissioning or maintenance
- Safe direction detection (SDI) for rolls, gates or machines
- Safely reduced speed (SLS) for setup mode or jog mode
- Safely limited position (SLP) for rotative or linear axes

FEATURES

- Rotational speed or position monitoring to SIL3 and PLe to EN/IEC 61508 / EN ISO 13849
- Special form fit with the positive lock for hollow shafts
- Compact 58 flange size with minimum space requirement inside the machine
- Flange size 90 mm for harsh applications
- Flexible mounting with hollow shaft, solid shaft or axial connector
- Compatible HTL output for fast safe inputs on samos®PRO COMPACT PLUS
- Resolutions from 360 ppr, 512 ppr and 1024 ppr depending on accuracy requirement
- PUR encoder cable resistant to oil, UV, ozone and solvents
- Over 100,000 hours of service life from mounting at hollow shaft encoder
- Maximum peak speed of 9000 rpm and continuous speed of 4000 rpm

TYPE CODE

SERIES SENC

SAFE HTL INCREMENTAL ENCODER

TYPICAL ARCHITECTURE

The integration of encoders for speed monitoring in a safety loop is possible in various configurations. Various solutions, depending on the existing safety level and/or existing equipment, are presented below.

NOTE:

The use of encoders in a safety loop requires external monitoring of the encoder signals. The safety modules offered by Wieland meet these requirements in a manner that is transparent for the user.

SAFE HTL INCREMENTAL ENCODER

TECHNICAL DATA				
Function	SENC-58Sxx	SENC-58Hxx	SENC-90S	SENC-90H
Incremental rotary encoder	Logging of position or angle changes via rectangular pulses with photoelectric sensing			
Nominal voltage U_N	24 V DC			
Operating voltage range U_B	11 – 30 V DC			
Galvanic isolation supply circuit - output circuit	No			
Supply current	100 mA without load			
Electrical data				
Output signals	Digital HTL signals (11-30 V DC)			
PIN coding	A, A/, B, B/ for safe incremental pulses 0, 0/ for index pulse (no internal plausibility check)			
Color coding of encoder cable (CABLE-M23CCW...)	A: gray, A/: pink, B: brown, B/: green, 0: red, 0/: black, +V: blue and green/brown, 0V: white and white/green			
Resolution	360 ppp, 512 ppp and 1024 ppp			1024 ppp On request: 360 und 512 ppp
Current per channel pair	40 mA			
Short circuit strength	Yes			
Protection against polarity reversal	Yes			
Mechanical data				
DIN-size	58 mm		90 mm	
Shaft type	Solid shaft	Hollow shaft	Solid shaft	Hollow shaft
Shaft diameter	1000 mm	14 mm	11 mm 12 mm on request	30 mm (reduction via reducing bushes possible)
Housing material	Powder-coated, die-cast zinc			
Flange material	Aluminum			
Shaft material	AISI 303 stainless steel			
Bearing	6800 series – sealed	6803 series – sealed	6001 series – sealed	6807 series – sealed
Maximum loads	Axial: 40 N, radial: 80 N	Axial: 20 N, radial: 40 N	Axial: 100 N, radial: 200 N	Axial: 25 N, radial: 50 N
Shaft moment of inertia	< 2800 g/mm ²	< 9500 g/mm ²	< 23 500 g/mm ²	< 120 000 g/mm ²
Static/dynamic torque	5 / 35 mN/m	10 / 85 mN/m	20 / 150 mN/m	30 / 300 mN/m
Max. peak rotational speed	9000 rpm	9000 rpm	9000 rpm	6000 rpm
Max. continuous rotational speed	6000 rpm	4000 rpm	6000 rpm	3500 rpm
Theor. mechanical service life*	> 29.7/10 ⁹ revolutions / 82,365 hours	> 24/10 ⁹ revolutions / 100,000 hours	> 7.25/10 ⁹ revolutions / 20,147 Stunden	> 18/10 ⁹ revolutions / 100,000 Stunden
Weight (approx.)	0.300 kg	0.280 kg	1.0 kg	0.650 kg
General data				
Protection class as per DIN 60529	IP65			
Ambient temperature / storage temperature	-25°C – +85°C / -20°C – +85°C			
Standards	EN/ IEC 61508, IEC 13849-1, IEC 61800-5-2, IEC 62061			
Approvals	CE, TÜV, cULus (in process)			

* continuous max. rotational speed – ½ max. load – to ISO 281:1990, L10

SERIES SENC

ACCESSORIES FOR ROTARY ENCODER LINE

Torque support with retaining bracket

Torque support with stator coupling

Reducing bush

Torque supports offer a high degree of rotatory stability, preventing the encoder rotating along with the shaft. Flange adapters are used to mount the encoder on a motor. The reducing bushes allow you to reduce the diameter of a hollow shaft encoder. The encoder cables from PUR with M23 connector (encoder side) and open core (controller side) offer high flexibility, ruggedness and durability.

Rated for maximum ruggedness and optimized safety

Safe drive with keyed joint.

Lockable, insulated reducing bushes protect against leakage currents.

A unique device for continuous hollow shafts, which effectively prevents slippage through locking pins.

Rugged mechanical design with additional bearing in the cover.

CABLE-M23CKW-PUR-200	Encoder cable, 20 m, PUR, shielded	R1.450.9340.0	1

The fault elimination of the mechanic is not part of the device and has to be provided by the operator. For additional information (e.g. drawings and dimensions), visit the eShop at <http://eshop.wieland-electric.com>

SERIES SNH

EMERGENCY STOP BUTTONS

APPLICATIONS

- Machine and plant manufacturing
- Building machinery and transport technology

FEATURES

- For applications up to IP69K
- Tamper-proof according to EN 418/EN ISO 13850
- Modular design
- Turn-to-reset
- Integrated illumination
- Optical indication of the switching state
- Up to PL e / Category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)

FUNCTION

Emergency stop buttons of the SNH series are used on or near machines for the protection of persons. They serve the purpose of switching off / stopping machines and systems to avoid or reduce emerging or existing hazards to persons. Emergency stop buttons of the SNH series are also used to avoid damage to the machine or working material.

- **Modular design** – The emergency stop buttons of the SNH series have a modular design, various actuating elements can be freely combined with the chosen contact design.
- **Failure protection** – The emergency stop buttons of the SNH series have a special failure protection that automatically detects when a contact block is removed from the respective actuating element and then switches off safely.

EMERGENCY STOP BUTTONS

TECHNICAL DATA	
Function	
According to EN 418/EN ISO 13850	Emergency stop button
Actuator	
Housing material	Plastic
Protection degree	IP 65
Operating ambient temperature	-30 – +70 °C (without illumination), -30 – +55 °C (with illumination)
Storage temperature	-50 – +85 °C
Switching cycles	> 50000
Max. torque	2.5 Nm
Installation diameter	22.3 mm
Contact blocks	
Contact type	NC contact NC contact with failure protection NO contact
Contact material	AgNi
Switching principle	Slow-action contact
Actuating travel	6 mm
Mechanical service life	1 x 10 ⁷ switching cycles
Electrical service life	1 x 10 ⁶ switching cycles
Application category	AC15 A600: 250 V, 3A DC13 Q600: 24 V, 2A
Protection class	II
Rated insulation voltage	600 V
Min. switching voltage	5 V
Min. switching current	1 mA
Thermal continuous current I _{th}	16 A
Max. through-type thermistor	20 mΩ
Max. bounce time	20 ms
Min. positive opening travel	3 mm
Operating ambient temperature	-30 – +85 °C
Storage temperature	-50 – +85 °C
Connection technology	Screw connection
Conductor cross-section	Max. 2,5 mm ²
Standards	EN 418 /EN ISO 13850
Approvals	TÜV, cULus

SERIES SIN

SAFETY SWITCH WITH SEPARATED ACTUATOR AND GUARD LOCKING

APPLICATIONS

- Personnel protection on machines with dangerous machine parts which move after switching off
- Locking of a machine or an automatic process when the guard is open
- Position monitoring of guard and guard locking

FEATURES

- Suitable for locking devices in accordance with EN 14119
- Flexible use with 4 horizontal or 4 vertical actuating directions
- Integrated protection against simple bypassing
- Long service life thanks to dust- and water-proof housing and a broad operating temperature range of up to 70 °C
- Locking force 1,500 N

FUNCTION

The mechanical safety switches in the SIN series are suitable for the secure locking (guard locking) of safety doors until a hazardous machine process has ended.

The safety switches have two independent contact blocks which reflect the position of the actuator on the one hand and the position of the guard locking on the other.

The release of the entry or a shutdown of the machine in case of danger is done by evaluating the contact blocks by a suitable basic device safe RELAY or through the samos® or samos®PRO safety systems.

SPRING-ACTUATED LOCKING

The safety switch on the guard is locked automatically when the actuator reaches its end position.

The guard is unlocked by applying a current to the internal electromagnets in the safety switch.

MAGNET-ACTUATED LOCKING

The safety switch on the guard is locked when the actuator reaches its end position by applying a current to the internal electromagnet.

When the current to the internal electromagnet is switched off, the guard locking is released and the guard can be opened.

VERSATILE INSTALLATION

Thanks to the adjustable actuator head and the large selection of actuators, the safety switch can be used to implement guard locking devices for all applications in machine construction.

Universal use through 8 different actuating directions and 5 different actuators:

SERIES SMS

SAFETY SWITCH WITH SEPARATED ACTUATOR

SMS 4XXX

SMS 3XXX

APPLICATIONS

- Access protection for operators of machines with dangerous machine parts which move after switching off
- Locking of a machine or an automatic process when the guard is open
- Position monitoring of movable guards in accordance with EN 60947-5-3

FEATURES

- Flexible use with 2 horizontal or 2 vertical actuating directions
- Protection against simple bypassing in accordance with EN 14119 through multiple coding of the actuator
- Long service life thanks to dust- and water-proof housing and a broad operating temperature range of up to 80 °C.
- Increased extraction force up to 30 N
- Easy installation with adjustment via slots and final fixing via round holes

FUNCTION

The mechanical safety switches in the SMS 2000, SMS 3000 and SMS 4000 series are suitable for the reliable position monitoring of movable guards (EN 60947-5-3).

If the associated guard on the machine is opened, the hazardous machine movement is switched off.

The machine is shut down in a hazardous situation by an analysis of the contacts carried out by a suitable basic device in the safeRELAY or by one of the samos® or samos®PRO safety systems.

Simple installation and wiring in each application.

SERIES SLS

POSITION SWITCH

APPLICATIONS

- Monitoring of doors, hoods or flaps
- Position detection of moving machine parts
- Object detection in conveying systems
- End position monitoring of components
- Position detection of roller doors
- Monitoring of sliding doors

FEATURES

- Position switch to EN 50047
- Optimized contact safety: 1 mA at 24 V DC
- Tool-free rotation and replacement of actuating device
- Actuating device from metal
- Protection rating IP66 and IP67
- Self-cleaning contacts
- Mechanical service life: up to 30 million switching cycles

FUNCTION

SLS series mechanical safety switches are suitable for the safe position monitoring of movable guards (EN 60947-5-3).

If the corresponding guard on a machine is opened, the hazardous machine movement is stopped.

In a hazardous situation, the machine is shut down when the contacts are evaluated by a suitable safe RELAY basic device or by either the samos® or samos®PRO safety system.

Simple adjustment and wiring for any application.

SERIES STS

NON-CONTACT SAFETY SWITCHES WITH CODING

STS 01XX

STS 02XX

APPLICATIONS

- Protection of people or machines
- Position monitoring of machine parts
- Position monitoring of doors and switches of isolating protective devices

FEATURES

- Individual coding for maximum manipulation protection
- Up to PL e / category 4 (EN ISO 13849-1)
- Up to SIL_{CL} 3 (EN 62061)
- Up to 30 sensors can be cascaded
- Automatic or manual start
- LED and semiconductor output for diagnostics
- Switching distance of 8 mm / 10 mm
- Protection class IP67 / IP69K

FUNCTION

The non-contact safety switches from the STS series are used for monitoring the position of machine parts and the position of doors and switches of isolating protective devices.

The STS series features integrated evaluation and built-in manipulation protection.

In the event of a hazard, access is approved or the machine is shut down, for example, by a device from the **safe**RELAY series or the **samos**[®] / **samos**[®]PRO safety system or by the safety switch directly.

Safety switches from the STS series are also able to switch larger loads without wear via safe outputs (OSSDs).

SERIES STS

NON-CONTACT SAFETY SWITCHES WITH CODING

TAILOR-MADE MANIPULATION PROTECTION

Different applications require different solutions when it comes to existing manipulation protection.

Safety switches from the STS series have 3 different coding variations, which means that they can always offer the right solution.

Coded:

The safety switch accepts every STS actuator.

Fully coded:

The safety switch only accepts the programmed-in STS actuator.

Unique:

The safety switch only accepts STS actuator delivered with it. An STS actuator cannot be programmed in.

DIVERSE INSTALLATION

The 5 actuation directions of the STS series and the maximum displacement between the actuator and switch element of 8 mm make installation easy even when the protective device to be monitored has large mechanical tolerances.

The resulting advantage is that it can be used universally on removable, rotatable, or sideways-moving protective devices.

5 different actuation directions for universal use

SERIES SMA

MAGNETIC SAFETY SWITCHES

SMA 01XX

APPLICATIONS

- Machine and plant manufacturing
- Packing machines
- Wood-processing machines

FEATURES

- Block-shaped design
- For harsh operating conditions
- Tamper proof
- Can be used up to PL e / Category 4 (EN ISO 13849-1)
- Degree of Protection IP67

TECHNICAL DATA

Set	SMA 011x	SMA 012x
Dimensions / mm (L x W x H)	36 x 26 x 13 mm	
Actuating distance / (Sao / Sar)	8 / 17 mm	
Directions of actuation	Front - Front / Front - Side / Side - Side	
Protection degree	IP67	
Contact type	Reed	
Contact assignment	NC / NO	NO / NO
Switching voltage	48 V DC	
Switching current	0.2 A	
Maximum cable length	20 m

SMI 1001

MAGNETIC SWITCH INTERFACE

FUNCTION

The SMI 1001 connects safety switches / position switches in series. Several safety switches or position switches can be connected to safe RELAY safety switching devices or to samos® and samos®PRO safety systems and evaluated.

APPLICATIONS

- Connecting in series of two-channel sensors with contact assignment NO/NO up to PL d / Kategorie 3 (EN ISO 13849-1)

FEATURES

- Control via a maximum of 4 two-channel sensors
- Signal output for each sensor
- Optical indication of the switching state of each sensor

The SMI 1001 features status displays for the switching state of the NO circuits of the connected sensors as well as four diagnostics outputs for the display of the switching state of the NO circuits via external LEDs or a control.

sensor PRO

COMPLETE SOLUTIONS FOR YOUR MACHINES + PLANTS.

SAFETY

Production processes have to be safe and reliable primarily. With our extensive and complete safety solutions, from sensors to safety controllers, we sustainably minimize the risks and dangers for people and machines and guarantee safe plant operation.

CONNECTIVITY

Your goal is fast installation and commissioning without any errors. Put your faith in our smart and standardized installation systems with pre-assembled systems for flexible usage in an industrial environment. Our components are internationally approved, save time and money during installation thanks to our plug & play principle, and are maintenance-free.

COMMUNICATION

Ethernet network structures are a standard feature of machines these days. Equipment and machinery are increasingly interconnected so that data can be acquired for control tasks for the purpose of remote maintenance or to optimize processes. We offer an extensive, future-oriented portfolio including our own IIoT cloud solution to be prepared today for “tomorrow”

CUSTOMER SOLUTIONS

We merge our engineering and production know-how in cross-functional teams and will deliver product and service solutions or complete safety concepts that are tailored specifically to your requirements and needs.

TRAINING + SERVICE

Our commitment will not end with the commissioning of your plant. We are available at all times to provide advice concerning standards, regulations, and provisions, to train your staff in a wide variety of subjects, and to support the entire lifecycle of your machines from engineering to commissioning and maintenance.

SOFTWARE

SISTEMA – SAFETY OF MACHINE CONTROLS

The SISTEMA software provides developers and testers of safety-related machine controls with comprehensive support when assessing safety within the scope of **DIN EN ISO 13849-1**. The name **SISTEMA** comes from the German "**SI**cherheit von **STE**uerungen an **MA**schinen" (safety of machine controls). The tool allows you to reproduce the structure of the safety-related control elements on the basis of the intended architectures and then enables an automated calculation of the reliability values at various levels of detail, including the performance level (PL) attained.

EPLAN – SUPPORT DURING CONFIGURATION

Support of automation projects naturally also includes EPLAN data and macros which can be very easily downloaded from the Wieland homepage at www.wieland-electric.com.

TRAINING

Wieland Electric offers a range of workshops about the topic of machine safety.

The training covers hazard and risk analysis, definition of the necessary safety functions using the SISTEMA tool and support for selecting and implementing the necessary technical safety measures.

We provide our safety workshops and product training sessions both as in-house training and as a workshop at our modern Sales Center in Bamberg.

- Risk assessment and risk reduction in accordance with EN 12100
- Definition of technical safety measures
- Assessment of safety functions (SISTEMA)
- Product training
- Training for samos®PLAN 6

GLOSSARY

Emergency stop monitoring
Floating contacts

Protective gate monitoring
Floating contacts

Position monitoring
Magnetic switch

Safety light grid / -light curtain
acc. to EN 61496 BWS Type 4 / Type 2

Two-hand control
according to EN 574

Controlled Stop
according to EN 60204-1 stop category 1

Standstill and motion monitoring

Safety shut-off mat monitoring
(4-wire principle, short-circuiting)

Valve position monitoring

Contact expansion

Machine building industry

Press

Elevator systems
in accord. with EN 81-1

Combustion plants
according to EN 50156-1

Process technology
according to IEC 61511

Finger protection

Hand protection

Arm protection

Access protection

Personal protection

Single-channel input circuit
1 NC contact or semiconductor

Two-channel input circuit
2 NC contacts or semiconductors

Two-channel input circuit, antivalent
1 NO / 1 NC contacts or semiconductors

Cross monitoring
between two input circuits

Synchro-check
between two input circuits

Safe Start
Start command is accepted only when the input circuits are closed

Combi-reset
Automatic start possible after voltage failure, based on the risk analysis

Automatic Reset
after application of the voltage and/or after safety request

Manual Reset
in the case of a rising edge at the reset input

Reset button monitoring
in the case of a falling edge at the reset input

Contacts (NO/NC)
safe semiconductor outputs

Alarm contacts

Safe changeover contacts

Safe semi conductor outputs

Safe OFF-delay

Safe ON-delay

Monoflop
for rapid tactile applications

Reset of time lapse
for OFF-delayed contacts

Expanded diagnostics
